

Are you still milling, or are you already printing?

The Paso company is developing a hybrid machine that combines the advantages of subtractive and additive manufacturing technology.

In times of increasing demands for resource efficiency, modern manufacturing must evolve and adapt to the new requirements. As a result, manufacturing equipment must also be further developed and enhanced with new possibilities. Move into the future with us and take the next step towards modern production.

Your advantages in metal 3D printing with LMD technology:

- New design possibilities
 - Bionic structures
 - Multi-material design
 - Load-oriented component geometry
- Application of wear / corrosion protection
- Repair applications through TARGET / ACTUAL comparison of the damaged component, machining removal of the defective area followed by rebuilding through additive manufacturing incl. finishing, all on one machine, with only one fixture

Are you interested in a machine or do you need parts in contract manufacturing? Contact us, we will find the right solution for you.
